

## Pall Europe, Ilfracombe

Moy Materials were brought to site in order to provide insulation upgrade to the roof of this landmark high value building in North Devon.

include in the upgrade of this building was a full clean and application of Enkopur in all the perimeter and box gutters. A complete solution was required to ensure zero water ingress in this building due to the high value electronic equipment that was stored within the building

The construction management team on this project faced challenges with the unique roof up-stands which required a unique application. in cooperation with our technical support team, quartz sand was added to the primer, 10-15 minutes after installation to enable the embedment coat of 2kg Enkopur. This would help to reduce the flow of Enkopur to allow for the insertion of Polyflex reinforcement fleece which in turn carried the top 'wet-on-wet' coat of 1.5kg.

Products Used BBA Certified Enkopur cold-applied liquid waterproofing system

Roof Area  
250m2 Facade    50m2 Flat Roof

Completed: January 2017
