Liquid Waterproofing

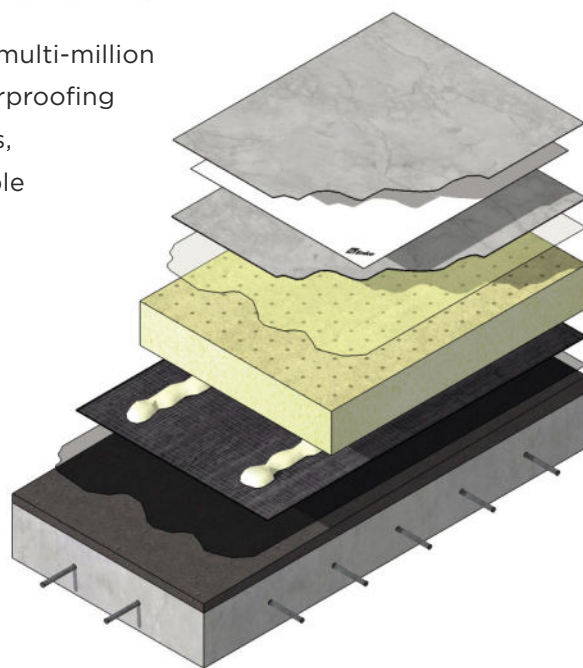

The cold-applied Liquid roofing industry has grown into a multi-million pound market with products at the very fore front of waterproofing technology. For both refurbishment and new build projects, MOY has a number of cold-applied Liquid products available that can be used across a variety of applications including roofs, balconies and terraces, which include a range of decorative finishes for aesthetic design. Durability on the MOY range of Liquid waterproofing is in excess of 25 years and certified by third party testing bodies.

Enkolan

Enkolan Liquid waterproofing is a single pack Silane Terminated pre-polymer waterproofing system with a fast wet-on-wet roller or brush applied application. Enkolan is completely solvent-free meaning this system can be used in the most sensitive of areas without any disruption to the building occupants. This makes Enkolan ideal for sensitive working environments such as hospitals and schools.

The Enkolan Liquid system is an incredibly versatile waterproofing system that is suited to all new build and refurbishment applications including overlay, warm roof, inverted roof and walkway situations.

The Enkolan system has a rapid wet-on-wet application and is capable of dealing with the most complex of roof details. It is also waterproof immediately upon application which protects the installers' work against unpredictable weather conditions. This system has been designed with zero compromise and is rapidly becoming the system choice for both installers and specifiers.

Enkopur

Enkopur Liquid waterproofing is a single pack polyurethane waterproofing system with a fast wet-on-wet roller or brush applied application.

The Enkopur Liquid system is an incredibly versatile waterproofing system that is suited to all new build and refurbishment applications including overlay, warm roof, inverted roof and walkway situations.

The Enkopur system has a rapid wet-on-wet application and is capable of dealing with the most complex of roof details. It is also waterproof immediately upon application which protects the installers' work against unpredictable weather conditions. This system has been designed with zero compromise and is rapidly becoming the system choice for both installers and specifiers.

Enkryl & Enkepren

Enkryl and Enkepren in conjunction with Enke Polyflex fleece are solvent free and economic restoration systems for sloping roofs. Both systems offer protection against moisture penetration and are appropriate for roofs with sufficient pitch. They can be applied directly to the prepared substrate with a roller or with airless spraying.

Enketop Balcony and Terrace System

Balconies and terraces are not only permanently exposed to heavy mechanical load, but also to extreme weather and temperature fluctuations. Problems resulting therefrom are well known such as exfoliating coatings, penetrating moisture caused by cracks in the floor, and mellowing surfaces.

Enketop Product Advantages

- Single-component material.
- Long-term safe sealing of decks, upstands and details.
- Fully reinforced with Polflex Fleece to facilitate structural movement.
- UV and environment resistant for long lifetime.
- Range of colour finishes.

Paro-Melt® Series

A custom 2nd generation hot melt structural waterproofing system used to waterproof inverted roofs and podium decks. The polymer modified bitumen compound used with a robust SBS protection membrane gives a tough monolithic but flexible roof system. Full immersion of our MOY distinctive blue reinforcement mesh ensures the correct amount of compound is being installed.

Designed primarily for use over concrete in inverted roof applications such as podium decks, green roofs, car parks, terraces and balconies. The full Paro-Melt® system includes a wide range of inverted thermal insulations, water flow reducing layers and other accessories.

WE TAKE PRIDE IN
OUR EXCELLENT
CUSTOMER SERVICE
AND EFFICIENCY

MOY is a leading FULL SYSTEM PROVIDER of high performance rooftop waterproofing systems, Moy's systems are certified by BBA, IAB and FM Global. With bases in the UK, Ireland and Germany our innovative, long-lasting waterproofing solutions and our unparalleled technical support has earned MOY a raft of high profile clients across the globe and place it at the forefront of this dynamic and competitive industry.

Moy provides specifications tailored to each project design using innovative, long lasting waterproofing solutions. Services are far reaching across the design and specification stages of commercial projects, right through to project completion and beyond. MOY services include specialist technical support, CPD presentations, roof surveys and condition reporting and on-site support throughout the lifecycle of the project.
