Single Ply

MOY's PVC and TPO products offer many benefits, cost-effective solutions that are lightweight and quick to install, offering increased durability up to 40 years as certified by the BBA.

Durability: Protan SE, BP and BPX Mechanically-Fastened PVC Roofing Membranes should have a life of at least 40 years, provided the roof is maintained in accordance with the Certificats holder's Mandatory Post-Installation Schedules.

Carrying accreditations from the BBA, NSAI and IAB along with many FM approved assemblies. MOY's can confidently offer a PVC Waterproofing system through their partnership with Scandinavia's largest producer of thermoplastic roofing membranes.

Millions of square metres of single ply membranes have been installed since they became popular in the 1970's with many of the original installations from that era still performing well today even in harsh climates.

Single Ply membranes offer a visually striking appearance that can be difficult to replicate with other materials commonly used to provide roof finishes. Single ply membranes are by their design versatile materials and with a full range of accessory products this ensures durable detailing on every project.

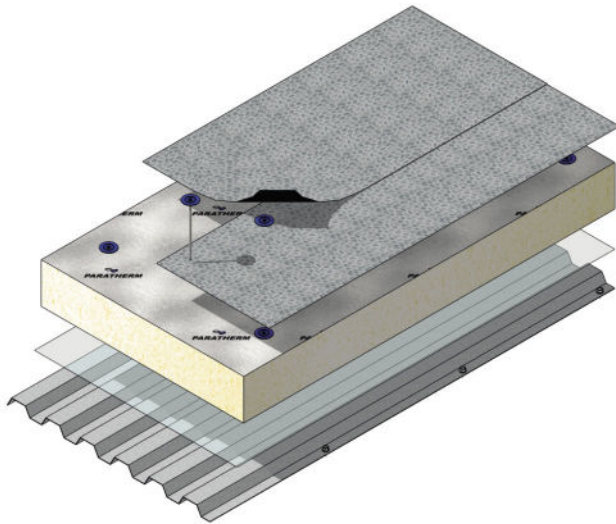

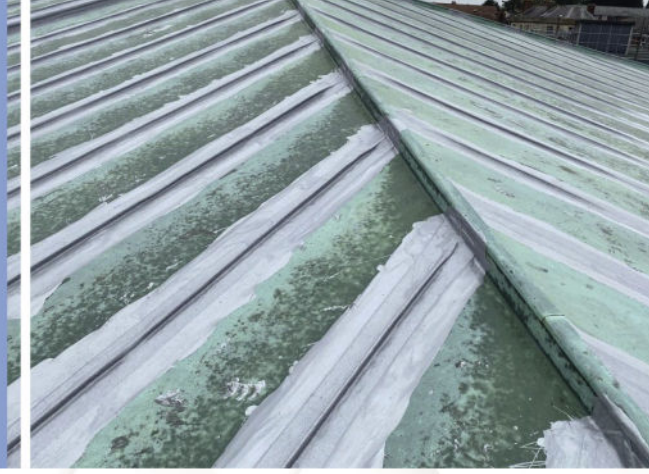

These attributes and other advantages make MOY Single Ply Roof Systems a popular choice for construction teams across the globe working in a broad spread of market sectors from Tech and Pharma to Food Manufacture.

MOY Assessories

MOY is a full system, services and accessories provider. Additionally MOY provides a full range of key system products bring to market a range of roofing accessories which are bound under one system specification and guarantee.
